

Jessica Reid

Email – jess.reid1992@outlook.com

Highly accomplished technical lead with 11 years of expertise delivering cutting-edge solutions at massive internet scale. Proven ability to drive cross-team and organisational influence while cultivating key client relationships, all underpinned by a dedicated team-first ethic. Adept at mentoring developers and enabling adjacent teams to reach their full potential.

Core Technical Skills

- **Programming Languages:** Java, Python, TypeScript, SQL
- **Cloud:** AWS (Lambda, EMR, DynamoDB, RDS, SQS/SNS), Kubernetes, Terraform, AWS CDK
- **Data Engineering:** Apache Kafka (Confluent Cloud), Batch & Event-Driven Processing, Orchestration
- **DevOps:** Infrastructure as Code (IaC), CI/CD, Cloud-Native Architecture, Cost Optimisation
- **Compliance:** GDPR, DSARs, Data Privacy Regulations, Responsible Gaming Compliance

Professional Software Experience

April 2026 to Present | Staff Data Engineer | FanDuel

Serving as a tech lead within a core data platform team, defining architectural design decisions that shape the multi-year technical roadmap of the organisation's data infrastructure.

Deepened expertise in Python and Terraform while gaining hands-on experience with Kafka (Confluent Cloud).

December 2024 to March 2026 | Senior Software Engineer | FanDuel

Led technical direction for a critical responsible gaming compliance team focused on customer geolocation across all products and jurisdictions.

Delivered best-in-class geolocation functionality, managing both short-term implementation sprints and long-term strategic planning with organisational leadership.

Utilised Java (Spring Boot) and Python within a modern cloud-native stack, leveraging Kubernetes, AWS SNS/SQS, Lambda functions, and Kafka.

Acted as the primary technical liaison between engineering, testing, and regulatory bodies to ensure seamless service modifications met compliance requirements.

August 2015 to December 2024 | Software Development Engineer | Amazon

Led the technical function within a petabyte-scale data pipeline organisation, overseeing pipelines for 2.4 Billion entities (with monthly growth exceeding 30M+).

Architected and developed the core data orchestration platform that powered various business vertical pipelines, handling both batch and event-based processing using ML technologies.

Led cross-functional projects and provided strategic input across organisational boundaries; acted as a global point of contact for critical design decisions and integration efforts.

Solely managed and optimised a multi-million-dollar compute budget, driving multiple initiatives that achieved double-digit percentage cost savings while maintaining peak performance and project timelines.

Drove compliance with global data privacy requirements (e.g. DSARs, On-Demand Deletion) and successfully mentored intern/permanent developers, resulting in proven career advancement for team members.

Implemented solutions primarily in Java across AWS services (EMR, DynamoDB, RDS, Lambda, SQS, SNS), leveraging TypeScript (AWS CDK) for infrastructure management, and Python/Node.js/React for scripting and front-end development.

Qualifications

2010 to 2015 | Computing Science MSci (Hons) 1st Class | University of Glasgow
