# Jessica Reid

- Location – Remote (UK)
- Email – jess.reid1992@outlook.com
- GitHub – https://github.com/jessr92
- LinkedIn – https://www.linkedin.com/in/jessr92/

## Professional Summary

Accomplished technical lead with 11 years of experience delivering data platform and infrastructure solutions at internet scale. Proven ability to exert influence across teams and organisations while cultivating key client relationships. Adept at mentoring developers and enabling adjacent teams to reach their full potential.

## Core Technical Skills

- **Programming Languages:** Java, Python, TypeScript, SQL
- **Cloud:** AWS (Lambda, EMR, DynamoDB, RDS, SQS/SNS), Kubernetes, Terraform, AWS CDK
- **Data Engineering:** Apache Kafka (Confluent Cloud), Batch & Event-Driven Processing, Orchestration
- **DevOps:** Infrastructure as Code (IaC), CI/CD, Cloud-Native Architecture, Cost Optimisation
- **Compliance:** GDPR, DSARs, Data Privacy Regulations, Responsible Gaming Compliance

## Work Experience

### Staff Data Engineer - FanDuel - April 2026 to Present

Serving as the tech lead for a core data platform team, defining architectural decisions that shape FanDuel's multi-year technical roadmap for its data infrastructure. Delivered across Python, Terraform, Java, Spring, and Kafka - spanning data engineering, platform engineering, and software engineering domains.

Designed a platform maturation plan to enable the consolidation of self-managed MSK clusters to a platform-managed fleet while retaining single-tenant isolation. Working with other organisations to migrate their self-managed MSK clusters onto Confluent Cloud, consolidating the footprint to reduce costs, improving operational health through a consistent platform, and freeing engineering bandwidth by transferring cluster operations to data platform engineering.

Coordinating a cross-organisational initiative to establish end-to-end data lineage, authoring ADRs to capture lineage from Flink, Spark, Kafka, and Tinybird and their immediate producers and consumers into a unified store. Early-stage project to enable impact analysis of data processing changes, while providing a company-wide view of data flows from the start of a customer journey through all downstream systems.

### Senior Software Engineer - FanDuel - December 2024 to March 2026

Led technical direction for a responsible gaming compliance team, ensuring customers could only access FanDuel's sports betting products from US states and Canadian provinces where they were legally located.

Delivered production-grade geolocation functionality, managing both short-term implementation sprints and long-term strategic planning with organisational leadership. Acted as the primary technical liaison between engineering, testing, and regulatory bodies to ensure service modifications met compliance requirements.

Implemented solutions using Java and Python within a modern cloud-native stack, leveraging Kubernetes, AWS SNS/SQS, Lambda, and Kafka.

### Software Development Engineer - Amazon - August 2015 to December 2024

Led the technical function within a petabyte-scale data pipeline organisation, overseeing pipelines for 2.4 billion entities (with monthly growth exceeding 30 million). Implemented solutions primarily in Java across AWS services (EMR, DynamoDB, RDS, Lambda, SQS, SNS), leveraging TypeScript (AWS CDK) for infrastructure management.

Architected and developed the core data orchestration platform powering business vertical pipelines, handling batch and event-based processing using Spark on EMR, SageMaker, and external system integrations.

Led cross-functional projects and provided strategic input across organisational boundaries; acted as a global point of contact for critical design decisions and integration efforts.

Solely managed and optimised a multi-million-dollar compute budget, driving multiple initiatives that achieved double-digit percentage cost savings while maintaining peak performance and project timelines.

Drove compliance with global data privacy requirements (e.g. DSARs, On-Demand Deletion) and mentored interns and permanent engineers, supporting their career advancement.

## Education & Qualifications

MSci (Hons) Computing Science, 1st Class - University of Glasgow - 2010 to 2015
